

Rodrigo Horvilleur Vallejos

Full-Stack Software Engineer | Ships and operates production systems

San José, Costa Rica | +506 6026-1200 | rodrixdere@gmail.com | rodrixdere.com | github.com/rodrixdere | linkedin.com/in/rodrigo-horvilleur

Summary

Full-stack engineer who ships systems and then keeps them running. Sole engineer on a platform serving 150 daily users, delivered in 8 weeks against a 3-month estimate. Builds and operates a production SaaS on a self-administered Linux server. Strongest in REST API design, relational modelling and deployment.

Skills

- **Languages:** TypeScript | JavaScript | Python | SQL | PHP | Java | C++
- **Backend:** FastAPI | Node.js | Express | REST API design | JWT | OAuth | NextAuth | role-based access control
- **Frontend:** React | Next.js | Vite | Tailwind CSS | responsive design
- **Databases:** PostgreSQL | MySQL | SQLAlchemy | Alembic migrations | relational modelling | audit trails
- **Infrastructure:** Docker | Linux server administration | GitHub Actions | CI/CD | Cloudflare | Vercel | Railway
- **Testing and practices:** pytest | PHPUnit | code review via pull requests | Agile / Scrum | Jira | technical documentation

Experience

University projects, each built for a real client and delivered. Fundación Curridabat was my TCU community service placement.

WorldCom de Costa Rica, San José | Full-Stack Developer

Jun 2026 - Jul 2026

- Made every corporate expense report auditable to any past date through a 12-table model with full status history, behind a five-role approval chain with configurable rates, PDF export and automated deadline notifications.

Fundación Curridabat, San José | Full-Stack Developer (TCU)

Jan 2026 - Mar 2026

- Replaced a paper-based workflow with a platform now serving 150 daily users, delivered in under 8 weeks against a 3-month estimate as the only engineer, by running requirements directly with non-technical staff and releasing in weekly increments.
- Kept the platform at zero critical failures since launch by settling the access model first: three roles enforced server-side in a REST API with JWT authentication, rather than hidden in the interface.
- Built both sides of the stack: React + Vite + Tailwind front end against a Node.js + Express API over PostgreSQL, deployed on Vercel and Railway.

George Angulo Fitness, San José | Frontend Developer

Aug 2025 - Dec 2025

- Shipped a multi-page React brand site with interactive map and transactional email, handed over with the technical documentation the client needed to run it without further support.

Projects

Cabinance | Personal-finance SaaS in production, built and operated solo

cabinance.app

- Covered the paths where a finance product actually fails with 139 automated tests: per-user data isolation, session invalidation on password change, rate limiting and resistance to account enumeration.
- Runs on a self-administered Linux VPS with Docker deploys through Coolify, Cloudflare in front and GitHub Actions CI on every push, with logging and uptime owned end to end.

DocWizard | Open-source CLI published on npm

npmjs.com/package/docwizard

- Generates the plain-language end-user guide a project never gets around to writing, by scanning its source code and summarising it through the Groq API.

Education

B.S. in Software Engineering | Universidad Latina de Costa Rica

2021 - 2026

Degree approved, diploma in process | English C1+ (verbal and written), Spanish native | AWS Academy Cloud Foundations, preparing AWS Cloud Practitioner
